CHEMISTRY AND PHYSICS OF LIPIDS

Subject index

Volume 100 (1999)

Acid dissociation constants; Deoxy analogue of diphytanylglycerophosphorylglycerophosphate; Diphytanylglycerolphosphorylglycerolmethylphosphate; Diphytanylglycerophosphorylglycerophosphate; Polar headgroup conformation; Proton conductance **100**, 41

Barotropic phase transition; Bilayer membrane; Unsaturation; Main transition; Phospholipids; Pressure; Vesicles **100**, 151

Bilayer membrane; Barotropic phase transition; Unsaturation; Main transition; Phospholipids; Pressure; Vesicles **100**, 151

Bilayer phase transition; Phospholipid mixture; Lipid bilayer; Phase diagram; Non-ideal mixing; Differential scanning calorimetry **100**, 139

Chiral alkylphosphonates; Lipase enantioselective recognition; Human gastric and pancreatic lipases; Monomolecular film technique **100**, 3

Cubic phase; Erucic acid; Hexagonal phase; Lamellar phase; Mesomorphism; X-ray diffraction **100**, 55

Deoxy analogue of diphytanylglycerophosphorylglycerophosphate; Acid dissociation constants; Diphytanylglycerolphosphorylglycerolmethylphosphate; Diphytanylglycerophosphorylglycerophosphate; Polar headgroup conformation; Proton conductance **100**, 41

Diacylglycerols; MALDI–TOF MS; Lipids; Quantification; Internal standard **100**, 115

Differential scanning calorimetry; Lipid bilayers; Mixed-chain lipids; X-Ray diffraction **100**, 101

Differential scanning calorimetry; Phospholipid mixture; Lipid bilayer; Bilayer phase transition; Phase diagram; Non-ideal mixing **100**, 139

Dipalmitoyl phosphatidylcholine; Surface tension; Surface viscosity; Surfactant phospholipids **100**, 81

Diphytanylglycerolphosphorylglycerolmethylphosphate; Acid dissociation constants; Deoxy analogue of diphytanylglycerophosphorylglycerophosphate; Diphytanylglycerophosphorylglycerophosphate; Polar headgroup conformation; Proton conductance **100**, 41

Diphytanylglycerophosphorylglycerophosphate; Acid dissociation constants; Deoxy analogue of diphytanylglycerophosphorylglycerophosphate; Diphytanylglycerolphosphorylglycerolmethylphosphate; Polar headgroup conformation; Proton conductance **100**, 41

(*E*)-4-hydroxynon-2-enal; Lipid peroxidation; (*E*)-9-(1-pyrenyl)-4-hydroxynon-2-enal; Heat shock proteins **100**, 89

(*E*)-9-(1-pyrenyl)-4-hydroxynon-2-enal; Lipid peroxidation; (*E*)-4-hydroxynon-2-enal; Heat shock proteins **100**, 89

Erucic acid; Cubic phase; Hexagonal phase; Lamellar phase; Mesomorphism; X-ray diffraction **100**, 55

Fatty acid cholesterol esters; Hydroperoxides; Photosensitized oxidation **100**, 127

Fatty acids; (5Z,9Z)-5,9-Hexadecadienoic acid; (5Z,9Z)-5,9-Nonadecadienoic acid; (5Z,9Z)-5,9-Eicosadienoic acid; Phosphatidylcholine; Synthesis **100**, 33

Heat shock proteins; Lipid peroxidation; (*E*)-4-hydroxynon-2-enal; (*E*)-9-(1-pyrenyl)-4-hydroxynon-2-enal **100**, 89

Hexagonal phase; Cubic phase; Erucic acid; Lamellar phase; Mesomorphism; X-ray diffraction **100**, 55

Human gastric and pancreatic lipases; Lipase enantioselective recognition; Chiral alkylphosphonates; Monomolecular film technique **100**, 3

PII: S0009-3084(99)00036-5

Hydroperoxides; Fatty acid cholesterol esters; Photosensitized oxidation **100**, 127

Internal standard; MALDI–TOF MS; Lipids; Diacylglycerols; Quantification **100**, 115

Lamellar phase; Cubic phase; Erucic acid; Hexagonal phase; Mesomorphism; X-ray diffraction **100**, 55

Lipase enantioselective recognition; Chiral alkylphosphonates; Human gastric and pancreatic lipases; Monomolecular film technique **100**, 3

Lipid bilayer; Phospholipid mixture; Bilayer phase transition; Phase diagram; Non-ideal mixing; Differential scanning calorimetry **100**, 139

Lipid bilayers; Differential scanning calorimetry; Mixed-chain lipids; X-Ray diffraction **100**, 101

Lipid peroxidation; (*E*)-4-hydroxynon-2-enal; (*E*)-9-(1-pyrenyl)-4-hydroxynon-2-enal; Heat shock proteins **100**, 89

Lipids; MALDI–TOF MS; Diacylglycerols; Quantification; Internal standard **100**, 115

Main transition; Barotropic phase transition; Bilayer membrane; Unsaturation; Phospholipids; Pressure; Vesicles **100**, 151

MALDI–TOF MS; Lipids; Diacylglycerols; Quantification; Internal standard **100**, 115

Mesomorphism; Cubic phase; Erucic acid; Hexagonal phase; Lamellar phase; X-ray diffraction **100**, 55

Mixed-chain lipids; Differential scanning calorimetry; Lipid bilayers; X-Ray diffraction **100**, 101

Monomolecular film technique; Lipase enantioselective recognition; Chiral alkylphosphonates; Human gastric and pancreatic lipases **100**, 3

Non-ideal mixing; Phospholipid mixture; Lipid bilayer; Bilayer phase transition; Phase diagram; Differential scanning calorimetry **100**, 139

Phase diagram; Phospholipid mixture; Lipid bilayer; Bilayer phase transition; Non-ideal mixing; Differential scanning calorimetry **100**, 139

Phosphatidylcholine; (5Z,9Z)-5,9-Hexadecadienoic acid; (5Z,9Z)-5,9-Nonadecadienoic acid; (5Z,9Z)-5,9-Eicosadienoic acid; Fatty acids; Synthesis **100**, 33

Phospholipid mixture; Lipid bilayer; Bilayer phase transition; Phase diagram; Non-ideal mixing; Differential scanning calorimetry **100**, 139

Phospholipids; Barotropic phase transition; Bilayer membrane; Unsaturation; Main transition; Pressure; Vesicles **100**, 151

Photosensitized oxidation; Fatty acid cholesterol esters; Hydroperoxides **100**, 127

Polar headgroup conformation; Acid dissociation constants; Deoxy analogue of diphytanylglycerophosphorylglycerophosphate; Diphytanylglycerolphosphorylglycerolmethylphosphate; Diphytanylglycerophosphorylglycerophosphate; Proton conductance **100**, 41

Pressure; Barotropic phase transition; Bilayer membrane; Unsaturation; Main transition; Phospholipids; Vesicles **100**, 151

Proton conductance; Acid dissociation constants; Deoxy analogue of diphytanylglycerophosphorylglycerophosphate; Diphytanylglycerolphosphorylglycerolmethylphosphate; Diphytanylglycerophosphorylglycerophosphate; Polar headgroup conformation **100**, 41

Quantification; MALDI–TOF MS; Lipids; Diacylglycerols; Internal standard **100**, 115

Surface tension; Dipalmitoyl phosphatidylcholine; Surface viscosity; Surfactant phospholipids **100**, 81

Surface viscosity; Dipalmitoyl phosphatidylcholine; Surface tension; Surfactant phospholipids **100**, 81

Surfactant phospholipids; Dipalmitoyl phosphatidylcholine; Surface tension; Surface viscosity **100**, 81

Synthesis; (5Z,9Z)-5,9-Hexadecadienoic acid; (5Z,9Z)-5,9-Nonadecadienoic acid; (5Z,9Z)-5,9-Eicosadienoic acid; Fatty acids; Phosphatidylcholine **100**, 33

Unsaturation; Barotropic phase transition; Bilayer membrane; Main transition; Phospholipids; Pressure; Vesicles **100**, 151

Vesicles; Barotropic phase transition; Bilayer membrane; Unsaturation; Main transition; Phospholipids; Pressure **100**, 151

X-ray diffraction; Cubic phase; Erucic acid; Hexagonal phase; Lamellar phase; Mesomorphism **100**, 55

X-Ray diffraction; Differential scanning calorimetry; Lipid bilayers; Mixed-chain lipids **100**, 101

(5Z,9Z)-5,9-Eicosadienoic acid; (5Z,9Z)-5,9-Hexadecadienoic acid; (5Z,9Z)-5,9-Nonadecadienoic acid; Fatty acids; Phosphatidylcholine; Synthesis **100**, 33

(5Z,9Z)-5,9-Hexadecadienoic acid; (5Z,9Z)-5,9-Nonadecadienoic acid; (5Z,9Z)-5,9-Eicosadienoic acid; Fatty acids; Phosphatidylcholine; Synthesis **100**, 33

(5Z,9Z)-5,9-Nonadecadienoic acid; (5Z,9Z)-5,9-Hexadecadienoic acid; (5Z,9Z)-5,9-Eicosadienoic acid; Fatty acids; Phosphatidylcholine; Synthesis **100**, 33
